Since I pay for the service XM radio provides I feel they should be permitted to broadcast information (as long as it does not harm the community) that the subscribers want to hear. I actually hope they expand their traffic and weather stations to cover my area. Local channels just do not offer enough coverage on a continual basis. They cover weather during morning and evening commutes but other then that you have no way of knowing traffic conditions in the area. In closing, I feel if the service is subscriber based the NAB should not be able to dictate the content.
